

How Data Savvy is your organisation?...

Help your organisation get ready for the new data protection regulations

How ready are you for the new data protection regulations?

By working together SR Consulting and Decisive IT have put together a package that combines organisational insight with technical expertise to help you embed effective data protection policies, procedures and systems to make data protection an effective part of your organisation.

- ◆ **Is your business aware of the new data protection regulations?**
- ◆ **Does your management have a sound grasp of your organisation's approach to data protection?**
- ◆ **Is data protection seen as an intrinsic and important part of your organisation?**

If any of your answers is not a resounding "yes" then a great step forward is make use of our specially designed data protection barometer. Our barometer explores all the key aspects of data protection within an organisation from management buy-in to cyber security giving you an impartial, expert and insightful analysis of where you currently stand.

What values does the data protection barometer bring to my organisation?

- ◆ Greater clarity on where your organisation stands on data protection highlighting areas that require attention.
- ◆ It provides a great opportunity for your business to discuss the impact of data protection regulations candidly and confidentially.
- ◆ At the end of the three-hour session the barometer will give you an immediate insight into your current position, and act as a useful springboard for discussing further actions to ensure data protection is effectively embedded within your organisation.

Building on the outcome of the data protection barometer Decisive IT will help you ensure that your IT based services are fit for purpose and provide you with the right level of security for your organisation.

- ◆ Are you confident that your IT systems have in place the right level of security to protect your organisation?
- ◆ Have you easy access to expert IT support to help you deal with any data loss incidents your organisation might face?
- ◆ Are you sure that you are storing your data in an appropriately secure way?

If any of your answers is not a resounding “yes” then a great step forward is to get Decisive IT in to audit your current arrangements and, if needed, help you put in place suitable IT based solutions to give your organisation the security and certification that it needs.

How can Decisive IT bring greater value to my organisation?

- ◆ Professional and expert advice on what IT systems your organisation really needs to operate effectively and securely.
- ◆ On-going support to ensure that your IT systems continue to be fit for purpose and secure.
- ◆ Expert help in gaining the accreditation your organisation might need to be really successful.

Let SR Consulting and Decisive IT work together to help you embed data protection within your organisation to enhance its effectiveness

Testimonials

Getting data protection right is key to any successful professional service business, such as ours. For us a great starting point was the SR Consulting barometer that really helped us get our priorities right. They and Decisive IT have been working with us to embed data protection as an effective tool within our business.

Andrew Winearls, Whiting & Partners

Using SR Consulting's business barometer has helped me to understand where I need to focus my efforts and attention as it has highlighted hot-spots for action – a very worthwhile process to go through for any business.

Chris Bateson, Horizon HR

Last year we were concerned data could have been compromised, because of the seriousness of the situation Decisive IT continued to work out of office hours and late in the evening until the extent of the issue had been fully investigated. The intervention of Decisive IT meant there was little impact to our business and what could have been a serious situation had been downgraded to a minor issue and potential disaster averted.

Managing Director, Recruitment Consultancy

Accidentally uploading clients' confidential information onto the internet can be regarded as a 'serious contravention' of data protection regulations likely to cause 'substantial damage or distress' and result in damages being payable. For people working away from the office this is a key area of concern. Decisive IT continuously monitor our IT systems including portable devices to ensure that it is safe from outside interference and they are readily available to ensure that these systems remain protected and up to date.
